Subject: Tenorm , agencyno. 498. DWM160048

I would like to express my concern about the Tenorm in Estill County landfill As you all know this is placed across the rode from our schools I have a daughter who is a teacher and a granddaughter that is a student in the school, along with the countless other children and adults that attend school there. What I don't understand is if there is a landfill that takes the Tenorm and is specially design for that reason and safety , why would anyone think it would be safe in a landfill that is not design to handle something like this. It is not rocket science to know that something so dangerous does not belong in a environment that is not intended to handle it.I would have to ask if you would honestly build your house across the street from the landfill with the knowledge that Tenorm is buried there. I think not. You know one thing I have noticed is there are not a lot of Buzzard flying around the dump like I have seen at other landfills , maybe they know something we don't know.
